SUGGESTED LIST OF EXPERIMENTS											CO1				
1. Design an algorithm and flowchart using word processor that reads the customer number and power consumed and prints the amount to be paid by the customer. An electric power distribution company charges its domestic consumers as follows															
Consumption Units					Rate of Charge										
0-200					Rs.0.50 per unit										

201-400 401-600	Rs.100 plus Rs.0.65 per unit excess 200 Rs.230 plus Rs.0.80 per unit excess of 400.

<p>3. Design and develop a C program to accept a number from the user and check whether it is a palindrome or not. Palindrome number : (a number is a Palindrome which when read in reverse order is same as read in the right order) Example: Palindrome :11, 101, 151 Not a Palindrome:123 , 100</p>	CO3	
<p>4. Develop a C program to find the sum of the digits of an integer and the number of digits in the integer that is given as input by the user. Test Case: Sample Input: 15390 Sample Output: Sum of the digits=18 No. of digits = 5 For an incorrect choice, an appropriate error message should be displayed.</p>	CO3	
<p>5. Develop a program to perform the following operations using two dimensional or multi-dimensional matrices:</p> <p>a. Addition of two matrices (3x3) b. Subtraction of two matrices (2x2) c. Multiplication of two matrices using dynamic memory allocation.</p>	CO3	
<p>6. Write a program to find the maximum and minimum element in a set of inputs using one dimensional array.</p> <p>7. Write a program to count the total number of vowels and consonants in a string. For example Input string: I am proud to be an Indian Output: Total vowels – 10 and Total consonants - 10</p>	CO3	CO4

<p>8. Develop a program to perform the following string manipulations without using string functions:</p> <ol style="list-style-type: none"> String copy String Concatenate String length String Compare <p>9. The Fibonacci numbers are defined recursively as follows:</p> <p>F1=1</p> <p>F2=1</p> <p>$F_n = F_{n-1} + F_{n-2}, n > 2$</p> <p>Write a function that will generate and print the first n Fibonacci numbers.</p> <p>Test the function for n=5,10,15</p> <p>10. Write a function using pointers to exchange the values stored in two locations in the memory.</p> <p>Test Case :</p> <p>Input : A=10 , B=-5</p> <p>Output : A= -5 , B=10</p> <p>11. Develop a program to build a database of students with the following attribute: Roll no, Name, Course, Stream, Percentage, and Division. Take input for each student in all fields except division. Calculate division of each student such that those students having percentage $\geq 60\%$ are belongs to first division. Similarly, for second and third division students having conditions $50 \% < \text{percentage} < 60\%$ and $35 \% < \text{percentage} < 50\%$ respectively. If any student has percentage less than 35% then write "fail" in division field. After building the database display the database of the students.
